Immersive and inclusive video and audio experiences for hybrid meetings

To make hybrid meetings work we need to bridge the experience gap between people working remotely and those in the office by bringing more innovations in video, audio, and devices. Every meeting attendee, no matter what physical space they are in should feel heard and included. In this session we will discuss how to leverage technologies like AI, speech, people/object/space identification and recognition, and intelligent audio and video to create new experiences that move us toward that goal.
