Microsoft Teams

PSTN Connectivity Options for Phone System

Teams Phone provides complete Private Branch Exchange (PBX) capabilities, allowing VoIP calls between users in your organization, regardless of geographical area.

However, to enable users to make calls outside your organization, you need to connect Phone System to the Public Switched Telephone Network (PSTN). Thankfully, Teams makes this easy with first and third-party options designed for different needs and technical requirements.

Evaluate the following PSTN connectivity models and select the model (or models) that work best for you.

Operator Connect

Choose from participating operators to manage the services and hardware to bring PSTN connectivity to Teams.

A great option for:

- Quick deployment
- Organizations with existing service agreements with participating operators
- Third-party management of SBCs and other hardware
- Multi-nationals with locations outside Microsoft Calling Plan markets

Requirements:

- Teams Phone license
- Service provided by a participating [Operator Connect partner](#)

Teams Phone Mobile

A single business-provided mobile number can also be your Teams Phone number, enabling seamless calling and voice services across networks and devices.

A great option for:

- Quick deployment
- Enabling a secure, compliant, and simplified calling solution for mobile and hybrid workers
- Saving costs associated with fixed lines, devices, and hardware

Requirements:

- Teams Phone license
- Service and phone number provided by a participating [Team Phone Mobile operator partner](#)

Direct Routing

Highly customizable deployment, allowing you to maintain existing service provider agreements and on-premises hardware. Available globally through partners.

A great option for:

- Organizations with existing PSTN infrastructure (SBC or voice trunks) and ongoing operator agreements
- PBX co-existence scenarios
- Regulatory requirements around telephony
- PSTN survivability needs
- Organizations with a large number analog devices

Requirements:

- Teams Phone license
- [Meet specific infrastructure requirements](#) for the supported SBCs, domains, and other network connectivity

Teams Calling Plans

A fast and simple way to set up PSTN calling, with Microsoft as your operator.

A great option for:

- Quick deployment
- Simplicity that comes with all-in-one solution from a single provider
- When there isn't on-premises PSTN infrastructure
- Flexibility with Domestic, International and Pay-As-You-Go Calling Plans
- Organizations within any of the 35 [Calling Plan Markets](#)
- Multinational organizations looking to simplify deployment and management

Requirements:

- Teams Phone license
- Calling Plan
